This is actually not that much to see, wokarun also explained the features in a video he uploaded and you can watch it here: You can download the Addon here: Instructions Before unzipping the addon, you will have to log in to MaxisBuilding App using your

GoogleAccount, here you will need to create a new account if you are not already registered in MaxisBuilding App. You can find the Designing Guide on MaxisBuilding's official Website here. If you plan to download the addon and use it, then you will also have to login to MaxisBuilding App and make sure you have the latest version there and not the old version of the App. NOTE:The Designing Guide is only available on MaxisBuilding App website. Video Tutorial: Note: This is still a BETA version and the Addon is still missing some features. There are a lot of plugins that are missing a description, description, keywords and a video

tutorial. This is only a rough Demo for this Addon and you can find a list of missing plugins here. MaxisBuilding is not officially launched and this Addon is still a beta version, so I do not recommend to try it on your projects. This Addon is meant to be used only in BETA mode, so you should not rely on it if it fails. Let me know what you think about this Addon and if you have any suggestions for MaxisBuilding App or Open Source Addons we should take a look at. I am looking forward to your thoughts and feedback. Credits: This Addon is made by Sholgo and I with the help of some other users. Update log This Addon was updated from v1.1.4 to
