The Elden Ring project is an action RPG game that takes place in the Lands Between, an area located between the Erebonian Empire and the Kingdom of Eldamar, where there are no people. A large number of monsters and great powers live in this area, and there are several factions that have formed through various reasons. The Elden Ring is made up of a small group of sorcerers, and they are trying to become something stronger, annihilating all other factions. \* Players can create a character and explore the world. \* Players can fight in a 3D world in real time, using action, dialogue, and time management. \* Players are able to freely change their characters, weapons, or magic. \* Players can share the memories of their characters through a unique online element. \* In Multiplayer, players can talk with each other, participate in party quests, fight together, and more. \* As a free-roaming game, players can explore the endless worlds. \* Players can obtain new areas through online play, clearing the regions of monsters and discovering the combat elements, weapons, and magic that lie within. \* Players can enjoy a huge variety of items and enemies. \* Players can enjoy the game's story thanks to a fully voiced script. \* Story: The story of the Elden Ring project is about a time when monsters took over the lands that the ancestors of the people inhabiting the Lands Between once loved. Furthermore, in order to successfully create an Elden Ring, a conflict must occur between the Elden Ring and one of the other factions that exist in the Lands Between. The way that the factions interact with each other is also an important aspect of the story. \* Monsters: As monsters do not have life, souls, or anything like that, they are also different from humans. However, we do not call them monsters, and instead call them monsters, because they are dangerous to humans. They can be higher than people in certain categories, but they cannot be considered intelligent. \* System: Our game has no random elements, and there are no events that occur without your input. However, there are still natural elements that occur, and our game still has a story that unfolds in a certain order. \* Development: The Elden Ring project started with a vision of a new kind of game. Originally, it was planned as a free game. However, it has now become a project with

Elden Ring is powered by a brand-new engine that combines two smart game engines (Engine CPE and Engine EVE). The engine features an improved AI with a high amount of detailed debug tools, a tremendously increased storage limit, and a new icon format that is more stylish and displays beautifully in the mobile version.

Why use the Elden Ring Engine:

- Quick Memory Recovery. When a non-essential part of the game is deleted by accident, the player will be able to easily recover to the same state using the editor, enabling them to quickly master the game.
- Controller Support. Support for arcade controllers, including trackpads such as the Microsoft Sidewinder, was added by staff.
- Improved Speed and Performance. Compared to the core engine, gameplay speed and sound has been improved, the search function has been greatly enhanced, the memory consumption limit has been increased, and the network speed has been improved.
- Advanced Editing. Player data was analyzed to improve efficiency when editing large quantities of data. Some of the editor functions were replaced so as to increase the speed of editing and the number of edit options. In addition, import/export tools were also used. These functions were added based on feedback from beta testers.
- Modding Support. An editor for modifying and creating modding data for each part was provided. Modding tools are supported.
- Integrated Online (

Yachihiro Takeba, known as the creator of the world's best action RPG "Dragon Quest" etc., has been working on the development of the "Elden Ring" game since March 2014. I am delighted to announce that the development of the game continues with the aim of making a fantasy RPG with an intense setting and high-quality graphics. We would also like you to see the increase in the quality of the game. I would also like you to play it. Thank you for your attention. This invention relates to high strength, high elongation stainless steel compositions and articles made therefrom, and more particularly to stainless steels having a low melting point and a high elongation of at least 25 percent. Stainless steels containing a minimum of chromium are well known in the art and are widely used for making a variety of structural and coating applications. It is also known that the ductility and tensile properties of stainless steels depend primarily on their Fe content, and that they are obtainable through careful control of the compositions and the total amounts of each of the alloying elements employed.
